

4-Week Hip Mobility Program

Simple daily guide for heels-down squats, general health, and golf rotation

Time commitment: **10-12 minutes/day, 5 days/week**. Optional 2-minute golf add-on before practice or rounds.

Safety: stop for sharp pain, numbness, tingling, front-of-hip pinching, or symptoms that linger. Work at a 3-5/10 stretch intensity; tension is fine, pain is not. Warm up with 2-3 minutes of easy walking or marching.

Why this helps

If your heels lift when you squat, the limitation can come from hips, ankles, trunk control, or a mix. This plan targets hip flexors, adductors, hip rotation, glutes, and ankles because they are common restrictions for squatting and golf rotation.

Weekly progress checks

- **Heels-down squat:** once per week, note how low you can go before heels lift.
- **Knee-to-wall ankle check:** toes 3-5 inches from wall, knee toward wall, heel down. Note best distance on each side.

Daily routine

#	Exercise	Dose	Why	Video
1	90/90 Breathing Reset	5 slow breaths	Relaxes the low back/hip flexors and sets the pelvis before mobility work.	Open demo
2	Half-Kneeling Hip Flexor Stretch	30-45 sec/side	Opens the front of the hip for posture, stride, and golf hip extension.	Open demo
3	Adductor Rock-Back	8-10 reps/side	Targets inner-thigh mobility needed for squat depth and hip turn.	Open demo
4	90/90 Hip Switches	6-8 slow reps total	Builds hip internal and external rotation control.	Open demo
5	Figure-4 Glute Stretch	30 sec/side	Opens glutes and deep hip rotators that can restrict squat and rotation.	Open demo
6	Knee-to-Wall Ankle Rocks	10 reps/side	Improves ankle dorsiflexion so heels can stay down in the squat.	Open demo
7	Supported Deep Squat Hold	30-60 sec	Integrates hips and ankles into a comfortable heels-down squat.	Open demo
8	Optional Golf Hip Turns	8 reps/side	Teaches hip rotation without forcing the low back to do all the work.	Open demo

Four-week progression

Week	Focus	What to do
Week 1	Learn positions	Use support freely. Do not chase depth.
Week 2	Add time	Add 10-15 sec to exercises #2, #5, and #7 if they feel good.
Week 3	Add control	Pause 2 sec at the end range of #3, #4, and #6.
Week 4	Integrate	After the routine, do 3 easy heels-down squats and 5 slow golf hip turns/side.

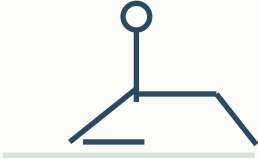

Exercise cards

1. 90/90 Breathing Reset

Dose: 5 slow breaths

Cue: Feet on wall or chair. Exhale slowly and let ribs soften down.
[Click for video demo](#)

2. Half-Kneeling Hip Flexor Stretch

Dose: 30-45 sec/side

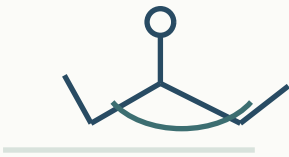

Cue: Tuck pelvis slightly, squeeze kneeling-side glute, then shift forward gently.
[Click for video demo](#)

3. Adductor Rock-Back

Dose: 8-10 reps/side

Cue: One leg out to the side. Rock hips back slowly; do not force the groin.
[Click for video demo](#)

4. 90/90 Hip Switches

Dose: 6-8 slow reps total

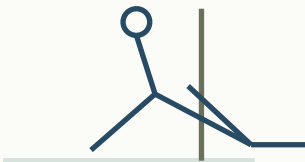

Cue: Use hands behind you. Rotate knees side to side like windshield wipers.
[Click for video demo](#)

5. Figure-4 Glute Stretch

Dose: 30 sec/side

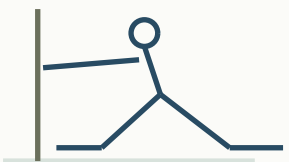

Cue: Cross ankle over thigh and gently pull thigh toward you. Do not force knee down.
[Click for video demo](#)

6. Knee-to-Wall Ankle Rocks

Dose: 10 reps/side

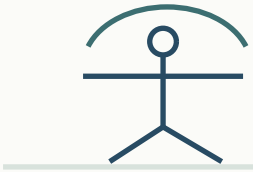

Cue: Keep heel down and knee tracking over middle toes as knee moves toward wall.
[Click for video demo](#)

7. Supported Deep Squat Hold

Dose: 30-60 sec

Cue: Hold support. Only squat as low as heels stay down. Breathe and relax.
[Click for video demo](#)

8. Optional Golf Hip Turns

Dose: 8 reps/side

Cue: Club or broom across shoulders. Turn smoothly; avoid cranking the back.

Weekly target

Minimum effective dose: 5 sessions/week. Best time: after a short walk, workout, shower, or at night when you can be consistent. Expect less stiffness in 1-2 weeks; squat depth improves gradually.

References

Mayo Clinic stretching guidance was used for safety principles: warm up, avoid bouncing, breathe, and stretch to tension rather than pain. Titleist golf instruction was used for the golf-rotation rationale.
